SAFETY

Apart from propagating medical safety products in our offered product range to the clients, the company also involves in commercial and operational activities that may affect the safety of its employees, the surrounding people and environment. As such, it is important that the company set a clear Safety Policy as operational guideline when conducting any of its activities, IF affecting matters on safety.

The company adopts the “**I.U.C.U.**” abbreviation for its internal SAFETY POLICY. The I.U.C.U is abbreviated from the collective phrases of “Identify, Understand, Choose and Upkeep”. It is a chain of CYCLE of activities that focuses on actions required to maintain continuous safe work environment. The I.U.C.U. is a practical concept that churns and makes our Safety Policy a dynamic, real and hands-on policy ; hence avoiding a theoretical rhetoric approach in view of the importance of the issues involved. The I.U.C.U implementation is even more critical since the company is uniquely involves in bio-medical-based risk exposed environment whenever its employees or engaged contractors conducting field-work.

Our Safety Policy Statement

“We are committed to working safely always by enforcing and focus on the implementation of the I.U.C.U cycle as the steps, arrangements and practices placed to ensure our employees and engaged contractors always working-safely and comply with Health and Safety legislations when conducting any type of operational work for the company”.
